Precise Hydraulic Power System Of The Great Leap Forward

ENERGY SAVING • POWER SAVING • NEW REVOLUTION

Polaris

Servo Power Saving System

01 Machinery High Pressure Inside Gearing Gear Pump.

- High pressure, 300 kgf/cm² maximum.
- Low noise feature perfectly suits working environmental needs.
- Low pulse and smooth operation.
- Axial and radial pressure compensation to achieve high working efficiency.
- Superior suction and wide range of hydraulic oil viscosity.
- Wide flow range, 3.5c.c to 125c.c for single pump.
- Available for multiple link pump connection which is applicable in multiple circuit.
- The German imported Eckerle high pressure internal gear pump as an optional equipment.

02 Machinery High Efficiency Servo Motor

- Precise and strict structure design not only improves the machinery precision but extends motor life.
- All process and unit have been through dynamic balance analysis and correction.
- All bearing is in precision class for extending motor life and high speed motor operation.
- Individual forced cooling system contributes servo motor keeping well cooling effect whether during high or low operation speed.
- High reliable encoder—Covered by defective web to ensure undisturbed signal which also upgrades close-loop reliability.

03 Machinery Current and Vector Variable-Frequency Drive

- Perfect current and vector control, even the smooth running and high torque/precision speed/torque control during extreme low speed.
- Various control function, including slip compensation, speed search function, over/low torque inspection function, and energy saving control function...etc.
- Outstanding torque characteristic to fulfill 150%/0.5Hz high torque feature.
- Above 220V 30KW or 380V 55KW powerful braking function, plus external braking unit.
- Supreme high efficiency energy saving control effect.
- Low noise operation and high carrier frequency SPWM adaptive way enables substantially noise suppression. Definitely the perfect power high frequency suppression countermeasure.

04 Power Consumption Test

The advantages of energy saving hydraulic oil system

- (1) Power saving for 30%~70% depending on using situation. Fast retrieve invested capital and turn it into profit without affecting machine efficiency and performance.
- (2) Shorten cooling system dimension and oil tank volume as for slow system characteristic and hydraulic oil temperature, which is capable of extending hydraulic oil and hydraulic oil unit life, even reduce the expense of material usage and maintenance.
- (3) Complete dimension selection for convenient application. Larger variable-frequency makes system control characteristic to be more stable and durable.
- (4) The maximum flow up to 400L/min for single system; large flow application needs less energy saving system than other brand, and this huge difference will be the big bonus for the user.
- (5) Convenient lead-in system, almost non-change design.
- (6) Providing stable performance and working environment improving due to low noise volume and quick reaction.

System Motion Curve Test

Power Consumption Comparison

Item	Power Consumption (30min)	Power Consumption Percentage	Power Saving Effect
Traditional Hydraulic Oil System	12.1kw	100%	0%
Energy Saving Hydraulic Oil System	4kw	33%	67%

▲ The comparison between Traditional Hydraulic Oil System and Servo Hydraulic Oil System

POWER SAVING
