## Oil-less Bearing

Oil-less bearing on the moving parts of platen and toggle, greatly reduces maintenance cost, and provides for a cleaner production environment.

## Automatic Lubrication System

An automatic lubrication system circulates and distributes oil equally for greater efficiency in lubrication and enhanced toggle life.

## Highly Rigid Structure Frame

Designed based on Finite Element Analysis (FEA) for Stress and Strain effects to ensure the SD's excellent frame structure.

## New Patented Injection Sliding Structure

The new pillar guiding plate structure is shortened to avoid barrel inclination and deformation. And with Molybdenum Disulfide coated bushings, it produces a less resistant, faster moving, very clean, oil free injection sliding structure.

## Digital Back Pressure Installation

The back pressure can be directly changed and set on the controller for easy operation.

## All-new Control System

KEBA i2880, with its 12" high resolution Touch Screen and ultra-fast scan time for high repeatability and quick responses, is a high-end controller.

ISO Certificate No. 84V1151

## Product Specifications (Servo Power-Saving System)
