

AUTOMATIC BLOW MOLDING MACHINE

Industrial 4.0

ECO Friendly

Blow Molding
Solution

“

SERVICE FROM HEART ACHIEVEMENT FROM COLLABORATION

從心服務, 成就合作

”

品質 | 創新 | 專業 | 服務

QUALITY, INNOVATION,
PROFESSIONALISM, CONSIDERATION.

自1992年成立至今，
鍍鑫塑膠機械銷售及服務全世界
押出中空吹氣成型機(又稱吹塑機)、
PET拉吹機、一步法射拉吹機、模具及週邊配備，
提供客戶專業的產品技術評估建議、最優良的機械性能，
高品質的機械結構、完善和迅速的售後服務。

鍍鑫獲得ISO 9001:2015之品質認證，
製造機台皆符合CE標準。
近年來致力於創新研發先進的吹塑成型技術
並協同專業研究機構創新技術合作，
使鍍鑫享有“先進就是鍍鑫、鍍鑫就是第一”之美譽。

Since FULL SHINE's establishment in 1992, Full shine specializes in manufacturing Automatic Blow Molding Machine, PET stretch Blow Molding Machine, One Stage Injection Stretch/Blow Molding Machine, Molds and optional equipment.

FULL SHINE plastic machinery always symbolizes excellence in making blow molding machinery. FULL SHINE has earned an excellent reputation for quality machines and thorough services around the world, selling to all over the world. The key to our success comes from considerate services and quality assurance on FULL SHINE blow molding machines, coupled with efficient global marketing and competitive prices. Due to the support of our experienced personnel, innovative design, and quality-machine performance, our customers place complete trust and reliance on FULL SHINE.

FULL SHINE never stops striving to maintain our regulative concepts:
“Service from Heart; Achievement from Collaboration”.
As the most active and competitive manufacturer in Taiwan,
FULL SHINE has the ISO 9001:2015 Certificate and CE Certificate on all machinery.

鍍鑫結合產業界之實務技術經驗及學術界資訊，
開發出多層共押出之關鍵技術。

多層共押出將不同特性的塑料結合吹塑，如2~6層複合瓶或汽車零配件，
以結合不同塑料，發揮出各層塑料之特性，

以達到高阻氣性、高阻水性、使用回收料比率70%以上之特色。

鍍鑫並以三層共押出中空吹氣成型機之專業技術，

參加台灣舉辦之中小企業績優廠商選拔，並榮獲頒發金手獎，
肯定鍍鑫公司在多層共押出之技術成就。在全球化的競爭時代，

鍍鑫公司以立足台灣、專業創新、勇於挑戰、品牌行銷、
放眼國際的胸襟和永續經營的理念

來自自我鞭策和期許開拓更寬闊的藍海市場。

FULL SHINE combines practical experience and academic information
technology industry, developing of the key technologies of co-extrusion.

The multi-layer co-extrusion blow molding of plastic combined with
different characteristics, such as 2 to 6 layers composite bottle or
automobile components, with a combination of different plastics, play features
layers of plastic in order to achieve high gas barrier properties, high resistance
water-based, use of recycled materials ratio of more than 70% of the features.

In the competitive era of globalization, FULL SHINE keeps running principle consistently -
“Think globally, footing locally, Active & Creative, enjoys challenge,
Brand Marketing, and Constant Operation”.

To prospect the future, we set our sights on stable quality of present products,
research and develop new technologies and design, expand the foreign market,
promote FULL SHINE company.

We expect our company to go ahead to the goal of diversification.

生產流程

PRODUCTION PROCEDURE

機械配備與功能

- 1 Suitable for making plastic products from 5ml upto 500L. FULL SHINE provides various machinery for best choice, such as A, O, H, P, I, and L Series Blow Molding Machines.
- 2 Die Head is torpedo design with special flow channel for swift and complete merge of plastic material inside and to provide better plasticized feature.
- 3 Various Die Heads from single, double, three, upto eight die heads for the better choice. Parison extrusion speed can be separately controlled by throttles.
- 4 Die Mouth Extrusion Adjustment by 3-point adjustment; simple and safe way for the operator.
- 5 High-melting Screw design by SACM 645 steel alloy for better merge of resin. Force-feeding design for the customized screw as an option.
- 6 Based on specific material, incorporating with high-melting screw design, the machinery can process: PE, PP, PVC, PS, PETG, PA, TPR, TPU, ABS, PC, EVA and K-resin.
- 7 Cutting parison by electric-heated Hot Cutter for cutting the parison of different resin. Multi-die head is available by Cold Cutter.
- 8 Blow Pin is driven by air pressure for neck twist-off design for precise and forced neck flash removal.
- 9 Blow Pin up/down, left/right, front/back adjustment is done by slide-board unit with the hand wheels for easy and accurate adjustment.
- 10 Blow Pin Mandrel has the chill-water circulation or to add the air-exhaust feature for forming the bottle neck precisely.
- 11 Blow Pin Pre-lift design before mold open, which is suitable for removing neck flash and ensure the cutting ring of the mold for long-term use.
- 12 Blow Pin movement is driven by the solenoid valve for precise micro pre-lift movement to ensure the neck accuracy of small-necked bottles.
- 13 Central distance of Blow Pins can be adjusted by Full Shine's special design.
- 14 Hydraulic System from YUKEN proportional control to provide strong and powerful mechanical movement and hydraulic clamping circuit.
- 15 The moving areas are with the manual self-lubricated devices to ensure the parts for better durability and wear-proof.
- 16 FULL SHINE special-designed Brake system for the Carriage to provide stable movement and swift positioning.
- 17 Mold Carriage connects to the bottle line-up frame.
- 18 Extruder Platen with the special design for up/down adjustment to provide the flexible distance between the extruding mouth and the mold. Mold Platen moving system is driven by roller chain for stable performance.
- 19 **Option:** Auto Jar Neck Cutting Device, for cutting jar-neck / wide-neck bottles with flat and smooth neck surface.
- 20 **Option:** Parison Wall Thickness Controller, from MOOG, Japan to provide multi-point thickness control to ensure the equal-thickness parison, available for 100 and 400-point control, and with the separate hydraulic system and stainless steel oil tank to provide the stable and high-performance close-loop servo circuit.
- 21 **Option:** Top & Bottom Deflashing Device is to remove the overflow around the plastic products automatically. The device is driven by pneumatic and hydraulic system to ensure the complete deflashing performance, and also can add the post-cooling function.
- 22 **Option:** Innovative Blowing Unit Left/Right Swift Movement, driven by the hydraulic system for fast and efficient mold-changing.
- 23 **Option:** HMI Touch Screen from Japan, to provide all function-and-setting control on the screen, such as mold file saving, error message report, and I/O monitor.
- 24 **Option:** Computerized Keypad Screen from Taiwan, to provide all function-and-setting control on the keypad, such as mold file saving, error message report, and I/O monitor.
- 25 **Option:** Servo Control System for Machine Operation, from Yuken, Japan or Taiwan, with the close-loop system for accurate machine performance and saving power; furthermore, available for upgrading to fully-electric system.
- 26 Customized design of blow molding machines are available to meet the customer's special request.
- 27 Innovative design and user-friendly machine to provide fast mold-changing, material-changing, and color-changing to satisfy the customer's request: on-time production.
- 28 PVC machinery with the special-designed screw, the barrel ventilator and air-exhaust design to ensure stable heating performance and to prevent the over-burned PVC issue.

油壓系統採用日本油研(YUKEN)之比例控制閥
Hydraulic System from YUKEN, Japan

下降吹氣系統，採用風壓驅動系統，適合沖斷各種瓶口的功能，且吹氣針切口部位具有水冷卻及強制導正之導槽設計，使瓶口口徑成形正確。

Pneumatic-driven Blowing System, Which is Capable of Deflashing the Bottle Neck. the Blowing Pin is Circulated by Chilled-water and Guiding Groove for Forcing to Guide and Accurate Bottle Neck During Calibrating.

厚薄控制器，採用日本MOOG之厚薄控制器。
Parison Wall Thickness Controller, made in Japan by MOOG.

吹塑模具
Blow Mold

電腦式控制面板，採用台灣製造之螢幕。(選配)
Computerized Screen, made in Taiwan (Optinal Device).

MONO/ MUTLI LAYER CO EXTRUSION AUTOMATIC BLOW MOLDING MACHINE

全自動單層/多層共押出中空吹氣成型機

P 系列 SERIES

平移式移模 / 開關模採線軌控制
Parallel Motion

多層共押出

適合吹塑由二層至六層之塑膠容器，例如農藥瓶、蕃茄醬瓶和化妝品瓶等。多層共押出技術採用鍍鑫特殊設計之模頭，讓不同屬性之塑料結合。

共押出技術可結合不同的塑料，如外層為亮面層，內層為阻隔層，並以接合層將內外結合以達到所需之塑料特性及成效。多層共押出應用為鍍鑫引領之先進技術。

MUTLI LAYER CO EXTRUSION

Applicable for single and double station with single to multiple die heads for producing up to SIX-LAYER CONTAINERS (2 TO 6-LAYER CO-EXTRUSION), such as chemical, catchup or cosmetic bottles.

Co-extrusion application allows unrelated materials with different characteristics to be combined in one parison through Full Shine special-designed die head. This combination binds different materials, such as combining high-gloss outside layer and barrier layer by an adhesive layer between them in order to achieve the perfect outcome. Co-extrusion application is the advanced technology by the leading brand: Full Shine.

Linear and parallel function of mold carriages

Curve arm design for mold clamping

Double Station

Special-designed Die Head for 2-layer to 6-layer Co-extrusion

Direct-mounted Motor, Made in Germany

- 曲臂式鎖模機構，配合德製線性滑軌為基礎滑動運作，移模迅速且穩定性高。
- 螺桿傳動方式採直結式德製齒輪箱搭配變頻馬達驅動，此為省能設計。
- 仰頭式模頭作動方式，使下料迅速，避免沾黏模具，縮短生產時間並方便校正調整。
- HMI觸控式電腦螢幕(日本富士)，搭配PLC電控系統，修改容易，方便於當地維護。
- 吹氣座配置快速移動變換位置功能，以油壓馬達驅動，以利模具更換、節省時間，此功能屬創新便捷設計。
- 吹氣系統加裝瓶口微抽裝置，使小瓶口口徑成型更精準。
- 可加裝選配自動廣口切割機、成品輸送帶、和厚薄控制器。
- 高效能之螺桿設計，適合生產各種不同的塑料。
- 裝配鍍蝕設計之移模剎車系統，移模穩定，定位精確。
- 選配移模加裝伺服馬達搭配閉迴路(Close-loop)系統，定位準確。

- Curved Arms for Strong Mold Clamping, Equipped with Linear Slide Guideway, Made in Germany for Swift Movement
- Screw Drive in the Control of Direct-mounted Gear Box and Inverter Motor as Power Saving Feature
- Die Head Unit with Head-lifted Device for Cutting Melted Material Swiftly and for Easy Alignment Adjustment
- HMI Touch Screen (10.4") from Japan, Fuji, Incorporating with PLC System for Easy Maintenance.
- Blowing Unit Driven by Hydraulic Motor for Changing Mold Easily-- Innovative Design
- Blowing Unit, Capable of Equipping Pre-lift Feature to Form Small Bottle Neck Precisely
- Equipped with Auto Cutting Device, Conveyor, Parison Wall Thickness Controller as Option.
- High-efficient Plasticizing Extrusion Screw for Processing Materials Completely.
- FULL SHINE Special-designed Brake System for the Carriage to Provide Stable Movement and Swift Positioning.
- Close-loop System with Servo Motor and Servo Circuit for Mold Carriage Movement, as Option

AUTOMATIC BLOW MOLDING MACHINE

全自動押出中空吹氣成型機

H 系列 SERIES

平移式移模 / 開關模採導桿控制
Horizontal Motion

O 系列 SERIES

斜移式模架
Oblique-slide Motion

Die Head with View Stripe & Blow Pin Unit

Four Column Slide Bar for Mold Clamping

移模方式採用導桿搭配油壓系統
作動，採V型斜移作動方式。

Carriage Movement by Tie Bars with Hydraulic
System to Move as V-type Oblique Movement.

- 開閉模採用圓形鋼柱導桿形式，平移式移模以德製線性滑軌為基礎滑動運作方式。
- 螺桿傳動方式採直結式德製齒輪箱搭配變頻馬達驅動。
- 仰頭式模頭作動方式，使下料迅速，避免沾黏模具。
- HMI觸控式電腦螢幕(選配)，搭配PLC電控系統，修改容易，方便於當地維護。
- 吹氣座配置快速移動變換位置功能，以油壓馬達驅動，以利模具更換、節省時間，此功能屬創新便捷設計。
- PLC系統搭配獨立式電控箱。
- 可加裝選配自動廣口切割機、成品輸送帶和厚薄控制器。
- 高效能之螺桿設計，適合生產各種不同的塑料。
- 裝配鍍鑫設計之移模剎車系統，移模穩定，定位精確。

- Fine Steel Slide Bars for Swift Mold Opening and Closing with Horizontal Motion of Carriages by Linear Slide Way.
- Screw Drive by the Control of Direct-mounted Gear Box and Inverter Motor.
- Mold Head with the Head Lift-up Device for Swift Material Extrusion.
- HMI Touch Screen (Option), Incorporating with PLC System for Easy Maintenance.
- Blowing Unit Driven by Hydraulic Motor for Changing Mold Easily - Innovative Design.
- PLC Program with Separate Electric Control Panel.
- Equipped with Auto Cutting Device, Conveyor, Parison Wall Thickness Controller as Option.
- High-efficient plasticizing Extrusion Screw for Processing Materials Completely.
- FULL SHINE Special-designed Brake System for the Carriage to Provide Stable Movement and Swift Positioning.

A 系列 SERIES

風壓式鎖模 Air Clamping Type

Double Die Head & Double Blow Pin

Top Blow Design

- 此機種為風壓鎖模設計，簡易設計，生產快速，適合多種小容量產品或棒棒冰容器之生產。
- 螺桿驅動採變頻器搭配皮帶輪齒輪箱驅動馬達。
- 新型雙模頭生產設計。
- 機台鎖模成型方式為風壓驅動。可升級為油壓驅動(選配)。
- 移模方式為前後搖擺方式，成品由正前方下料槽取出。
- 獨立式電控箱搭配簡易式面板。
- 簡易型吹瓶機，適合初期較低資金投資生產。

- This Type Is the Pneumatic-clamping Blow-molding Machine, Suitable for Making Popsicle (Ice-lolly) & Various Small-size Bottles.
- Extrusion Is Driven by the Inverter Motor With Pulley-drive Gear Box.
- Innovative Design for Double Die Head Production.
- Mold Clamping Is Driven By Pneumatic System, Available for Upgrading to Hydraulic-drive System (Option).
- Carriage Movement Is the Swing Movement For Taking the Finished Products from the Front of the Machine.
- Independent Electric Control Box with Simple Control Panel.
- Simple-type Blow Molding Machine, Suitable For Low and Initial Blow Molding Machinery Investment.

ACCUMULATOR BLOW MOLDING MACHINE

儲料式押出中空吹氣成型機

I 系列 SERIES

側向取出
Lateral Take-out

L 系列 SERIES

前向取出
Frontal Take-out

- 搭配德製傳動齒輪箱及日製變頻器驅動，無動力損耗，取代傳統型以油壓馬達驅動。
- 押出平台可上下左右調整，採油壓馬達控制。
- 模頭設計為模頭心式，搭配油壓控制之射料活塞，儲料缸型採先進先出設計模頭，儲料迅速，縮短換色時間。
- 開閉模採德製滾珠線性螺桿，定位精準、移模穩定、模架裝配電眼等安全裝置，及搭配安全門。
- 油壓驅動吹針上下，有水冷卻裝置，下吹裝置及側吹裝置，可搭配生產水塔、化學桶、冰桶等異型產品。
- 空壓驅動之展料裝置，使成品圓周更均勻，適合吹塑大型容器。
- 選購之高夾取力機械手臂，附有冷卻系統以防止塑料黏附，將吹塑完成的成品，自動取出，使用輕量化鋁合金材質設計。
- 子母缸設計之油壓缸，子缸加速開模，驅動母缸鎖模，有效發揮油壓驅動高速效能，模架由導軌控制，移動迅速。
- 換模簡單、方便，客製化之油壓脫模裝置，對生產凹型的產品，可快速脫模。
- 導柱式開模結構，使開模時模板平均受力，無模板結構變形之虞，上下平衡出力迫緊油缸設計。
- 油壓系統採YUKEN閥控制，壓力及流量比例式油壓迴路設計，壓力可依產品需求做多段控制，獨立式全密封油箱設計，保持油路最佳清潔度。
- 獨立式控制主機，搭配富士FUJI 10.4吋彩色觸控式螢幕，功能詳細、操作簡易、貼近人性化設計。
- Equip with gear box, made in Germany, and inverter, made in Japan, which can adjust screw ration speed and reduce power wastage.
- Extrusion platen can be adjusted up and down, leftwards and rightwards by the control of hydraulic motor.
- Die head is with special -designed core, hydraulic controlled injection piston and cylinder, and First in and First out design, which is capable of fast accumulation and shortens the time of changing color.
- Close and open mold is controller by linear slide way, make in Germany, for accurate positioning and stable carriage movement. Mold carriage is equipped with light curtain/electric eye protection, and safety gate.
- Blow pin movement is hydraulic-driven with water-cooling design. This machine is also with bottom blowing and side blowing option.
- Parison enlarger is pneumatic-driven, which makes equivalent products shape, suitable for blow molding huge containers.
- Optional robot arm is with water cooling design to avoid material stick, and is capable of taking our heavy products automatically. The material is light aluminum alloy.
- Mold carriage is operated by double piston cylinder. Sub Cylinder speed up mold close, and Main Cylinder is driven with higher clamping force.
- Carriage movement is controlled by slide rails for easy mold changing. Special-designed mold core-pull function is suitable for making concave products, such as handle jerry cans, expelling products rapidly.
- With guide bar of molds clamping, the mold platens are with equal clamping force, without the concern of platen deformation. Top and bottom clamping force is with main-cylinder design.
- Hydraulic system is YUKEN hydraulic valves with proportional flow and proportional pressure control circuit, which can be adjusted based on different products features. Separate and airtight oil tank maintains oil purity.
- Separate control cabinet is equipped with Fuji 10.4" colorful HMI.

- **20%** Vergin material
outer layer / 外層
- **80%** Regrind from scrap
inner layer / 內層

“ SAVE THE **EARTH** ; SAVE / REDUCE **PLASTIC** ! ”
友善地球；塑料減量，便利不減

塑膠製品為現代生活帶來許多便利。
然而，廢塑料的管理不當讓好處轉化為嚴重的環境問題。

從現在開始，大多數法律和政策都規定“**考量目的性及必要性來使用塑膠製品將有助於減少環境污染**”
從循環經濟的角度減少塑膠使用、推進再生設計
是不可避免的趨勢。減碳、減塑，是未來一大課題。

鍍鑫的單層機，可以使用再生回收料，用於生產家庭
日化品或戶外用品，如沐浴乳瓶等。
廣泛來說，只要非應用於食品/醫療包裝，
其餘包裝容器皆可添加回收料，至於比例為何？
這取決於客戶的需求。然而，鍍鑫的單層機，
可滿足100%再生塑料製程，且不會影響產品品質。
友善環境，讓塑膠原料更有效的回收再生循環利用。

不僅如此，鍍鑫的Co-ex（多層）吹瓶機擁有穩定且耐用的吹瓶成型工藝，最多可減少80%的全新塑料用量。
所有的多層機都屬於客製化，機器規格可以根據客戶的要求量身打造。

Plastic has provided many benefits to modern society.
However, the no proper handling of after used packaging is turning its
benefits, into significant environmental problems.

From now on, most laws and policies regulate the
" **conscious and efficient use of plastic to reduce environmental pollution.** "
It is an inevitable trend to reduce the use of plastics and promote
recycling design from the perspective of circular economy.
Carbon reduction and plastic reduction are a purpose in the future

FULL SHINE single-layer machines can also be added with recycled materials
for the production of household daily chemicals or outdoor products.
Such as shower gel bottles, etc. From the perspective of the all items,
as long as it is not for food/medical purposes, Recycling materials can be
added to the packaging container. In fact, it depends on the customer's needs.
However, the FULL SHINE single-layer machine Plastics can use
100% recycled plastics without affecting product quality. It is environmentally
friendly and allows plastic raw materials to be recycled more effectively.

Furthermore, FULL SHINE Co-ex (Multilayer) blow molding machine,
brings a long-time proven bottle formation process that reduces up to 80%
new resin plastic use. All co-extrusion machines are customized made,
machine specification can request by customer need,
custom made for all customers.
